Dalian University of Technology, ☎ : 17343984452

Mail: wuy095202@gmail.com Web: BerserkerVV.github.io Google Scholar: [Zexi Wu](#)

EDUCATION

University of Macau	Macau, China
Master of Computer Science	2026.8~2028.6
Advisor: Prof. Jianbing Shen	
Dalian University of Technology	Dalian, China
Second Bachelor's Degree, Computer Science	2023.9~2025.6
Dissertation: : <i>Virtual Staining of Pathology Images Based on Generative Models</i>	
Advisor: Prof. Hongming Xu	
Dalian University of Technology	Dalian, China
Bachelor's Degree, Food Science and Engineering	2019.9~2023.6
Thesis: <i>Development and Antioxidant Evaluation of Silk Peptide Oral Liquid</i>	
Advisor: Prof. Feng Guo	

RESEARCH INTERESTS

Generative Models (Flow Matching, Diffusion, Video Generation)
Vision-Language Models and MLLM
Video Understanding and Long-form Modeling

TECHNICAL SKILLS

Programming: Python, C++, MATLAB
Deep Learning: PyTorch, TensorFlow
Generative Modeling: Diffusion Models, Flow Matching, Rectified Flow, GAN
Tools: Git, Linux, LaTeX

RESEARCH EXPERIENCE

Dalian University of Technology	Dalian, China
<i>Research Assistant, Department of Computer Science— Video Generation</i>	2025.9 – 2025.11
Designed a lightweight and unified framework for transferring semantic information from a reference video to a target image, enabling high-fidelity cross-modal semantic alignment with significantly reduced model parameters. The work is accepted to Findings of CVPR 2026 as first author .	
Dalian University of Technology	Dalian, China
<i>Research Assistant, Department of Computer Science— Video Understanding</i>	2025.7 – 2025.10
Proposed a training-free, plug-and-play keyframe selection method that jointly maximizes relevance and diversity using a greedy algorithm. Achieved state-of-the-art results across multiple evaluation benchmarks, leading to a co-first-author submission to TIP 2026 .	

Dalian University of Technology

Dalian, China

Research Assistant, Department of Biomedical Engineering—**Virtual Stain**

2024.9 – 2025.6

Developed a multi-label multi-instance learning framework for predicting biological markers from breast cancer whole-slide images, significantly improving robustness under heterogeneous staining conditions. Investigated generative-model-based virtual staining methods to guide downstream biomarker prediction, enabling more consistent feature extraction across staining variations.

WORK EXPERIENCE

Movie Utopia

Senior Partner

Present

LiblibAI

Video Editing Algorithm Intern

2025.12 - Present

Conducted research on video editing models, focusing on improving semantic accuracy and controllability in conditional generation.

Zhang X, Wu Z, Li Z, et al. AdaRD-key: Adaptive Relevance-Diversity Keyframe Sampling for Long-form Video understanding[J]. arXiv preprint arXiv:2510.02778, 2025.

HONORS & AWARDS

Outstanding Undergraduate Thesis Award, Dalian University of Technology

2023
